

ECOMMERCE & B2B EDITION

How Provis Works

For brands and wholesalers deciding who should build, speed up or connect their online store and B2B ordering. Each page answers one question.

Two working days

to a free estimate: approach, timeline and cost range

Day one

your code, cloud account and domain are in your company's name

5.0

on Clutch, from 12 reviews (October 2026)

Who is Provis, in one page?

The facts a vendor-intake form asks for. The ratings link to their live profiles.

200+

projects delivered since 2012

25+

engineers, designers, QA and project leads, in India

5.0

on Clutch, from 12 reviews

4.6

on Google, from 36 reviews

Company	Provis Technologies, a software development company
Working hours	India Standard Time (UTC+5:30); see Time zones
Leadership	Vivek Sharma, CEO & Founder
What we build	Online stores, B2B ordering systems and AI features; we also build SaaS products (see What we build)
Industries	Wholesale, industrial supply, medical uniforms, apparel, health and wellness
Ways to work with us	A fixed-scope project, a dedicated team or team extension, CTO as a Service, or support and maintenance (see Working together)
Reviews (October 2026)	Clutch 5.0 · 12 reviews, Google 4.6 · 36 reviews, Upwork Top Rated · 100% job success clutch.co/profile/provis-technologies-private share.google/v2Di6sTxriyOO40c6 upwork.com/agencies/1084860007191973888

Do you build my kind of product?

Three kinds of work, each with clients we have built it for.

Online stores

Shopify, Shopify Plus and WooCommerce stores: new builds, replatforming, speed and ongoing growth.

LGXNDS, MotionLasers, Merchdize

B2B commerce

Ordering portals and apps for trade buyers, trade pricing, ERP and stock sync, catalog feeds to marketplaces.

TrueWholesale, Natural Uniforms, Tanks & Vessels

AI

Chatbots and search over your own content, AI inside a live product (agents, MCP servers) and workflow automation.

TrueWholesale MCP server, Gyanee.ai, Chitra, ProvisCommerce.ai

SYSTEMS WE HAVE CONNECTED, AND WHO FOR

Zoho ERP, live stock · TrueWholesale	Razorpay; Algolia search · TrueWholesale
NowCommerce order and stock sync · Natural Uniforms	Megaventory inventory sync · Cosmetology.co.za
Resale marketplace API · Tanks & Vessels	Escrow payments · Reztorer

BUILD

React, Next.js, Node.js, Laravel, Flutter, PostgreSQL

CLOUD

AWS, Azure

STORES

Shopify, Shopify Plus, WooCommerce, BigCommerce, Magento

AI

OpenAI, Anthropic, Ollama, Qdrant, n8n

We also build SaaS products and add AI inside them: ask for the SaaS & AI edition.

Who works on my project?

One team of 25+ engineers, designers, QA and project leads, working in India on IST.

Vivek Sharma

CEO & Founder

Takes the first call. The booking link is on the last page.

Engineers

Set out the technical requirements and the architecture before development starts, then build.

UI/UX designers

Design the interface your users work in.

QA team

Tests the product before launch.

Every request is read by a person on our team in India, not an autoresponder.

What happens, in what order, and when do I see progress?

How a project runs with Provis, from the first conversation to the support after launch.

A NEW BUILD

0

Free estimate

An approach, a rough timeline and a rough cost range for your scope, in two working days.

1

Discovery & strategy

We talk through your goals and your users, and shape a plan around what the product has to do for your business.

2

Planning & architecture

Our engineers set out the technical requirements and the architecture before development starts.

3

Interface design

Our UI/UX designers create an interface your users find clear and easy to use.

4

Development

We build in the open: you see the work as it progresses, and your feedback goes straight in.

5

Testing & QA

Before launch, our QA team tests the product to make sure it works as intended.

6

Launch & support

We launch it and stay on, with support, maintenance and regular updates that keep it running well.

A store you already run

We take on platforms that are already live, modernise them piece by piece, move them to the cloud when it's time, and keep them running.

A first look is free: a store speed audit of the store you run.

Need people rather than a project? Our engineers join your sprints and rituals.

When can we talk live?

Our team is in India, on IST (UTC+5:30). Here is the gap to where you are.

WHEN IT'S 9:00 AM FOR YOU, IN INDIA IT'S

UAE and Oman India 1h 30m ahead 10:30 am ALL YEAR	Saudi Arabia, Qatar, Kuwait, Bahrain India 2h 30m ahead 11:30 am ALL YEAR
London India 5h 30m ahead 2:30 pm STANDARD 1:30 pm DAYLIGHT	New York India 10h 30m ahead 7:30 pm STANDARD 6:30 pm DAYLIGHT
Chicago India 11h 30m ahead 8:30 pm STANDARD 7:30 pm DAYLIGHT	Los Angeles India 13h 30m ahead 10:30 pm STANDARD 9:30 pm DAYLIGHT
Sydney India 4h 30m behind 4:30 am STANDARD 3:30 am DAYLIGHT	Our team in India UTC+5:30 · no daylight saving IST

 India does not change its clocks, so the gap moves when yours do. The gap shown is on your standard time.

Do I own everything, and can I walk away cleanly?

The accounts your product runs on are in your company's name from the start, and our team is invited in.

Code

Your theme, app and integration code, in a GitHub or GitLab organisation in your company's name; our team joins as collaborators

✓ YOURS FROM DAY ONE

Cloud hosting

The AWS, Azure or Google Cloud account, with your card on it

✓ YOURS FROM DAY ONE

Domain and DNS

Registered to you, with you as the admin

✓ YOURS FROM DAY ONE

WHAT THIS MEANS

You decide who has access to your product, and you can remove it at any time. If we stop working together, the code, the cloud account and the domain are already yours.

What should I check before handing over my store?

The questions your IT or finance lead will ask before anyone gets access to your store. Ask us each one before you sign.

WHAT WE CAN SAY TODAY

The accounts your product runs on are in your company's name, with our team invited in, so you decide who has access and can remove it at any time (see Ownership).

ASK US THESE BEFORE YOU SIGN

Access

Who gets production access, how it is granted, and how it is removed when someone leaves the project

Secure development

Code review, dependency and secret scanning, staging kept separate from production

Backup and recovery

Backups, restore tests, and how long recovery takes and how much data could be lost

Incidents

Incident response, and how soon you are told about a breach

Continuity

What happens if a key person on our side is unavailable

Payments

PCI scope for your store and checkout; who can see orders and customer details

Documents

Insurance certificate; a completed security questionnaire, if one exists

Credentials and devices

How passwords and keys are stored and shared; company devices, disk encryption, screen lock

Testing for weaknesses

Vulnerability scanning and penetration tests: how often, and who runs them

Sign-in

MFA on every account; single sign-on

People

Background checks; confidentiality terms in staff contracts; an NDA for project work

Data protection

Whether we sign a DPA; GDPR, India's DPDP Act and UAE data law; where data and backups are kept; subprocessors

Certifications

Held, in progress, or a plain "we do not hold SOC 2 or ISO 27001"

Will you still be here after launch?

We launch a product and stay on, with support, maintenance and regular updates. These clients have stayed with us.

CLIENT	WHERE IT STARTED	WHERE IT IS NOW
 TrueWholesale	Rebuilt paper-and-agent ordering into a web store	→ Built the retailer app and moved it to Shopify; still maintains the theme, integrations and app
 LGXNDS	Came to us for Shopify fixes	→ Kept us on for mobile, custom tools and the launch of its second brand

IN THEIR WORDS

They not only looked at the products from a technology point of view but from a business point of view as well.

Madhup Bansal

CEO & Co-Founder, TrueWholesale

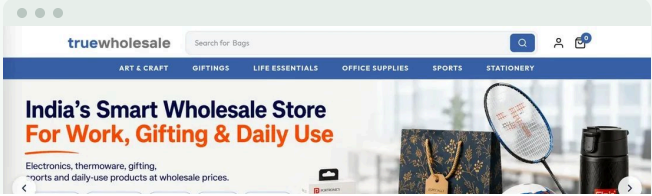

Provis Technologies has been an excellent partner for our Shopify work. Their team moved quickly on fixes, improved the experience of the store, and helped us turn ideas into working features without unnecessary delay.

Fernando Arias

Founder, LGXNDS

Have you done this for businesses like mine?

Online stores and B2B ordering we built. Where a figure appears, its source is named.

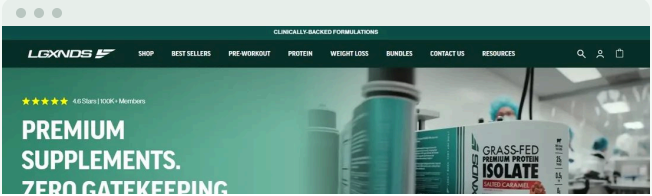

TrueWholesale

B2B · Wholesale · India · Laravel, Vue.js, Flutter; now Shopify

From paper order books to a web store and a retailer app, with live stock from Zoho.

200% more sales, 60% less order-processing time, as reported by TrueWholesale

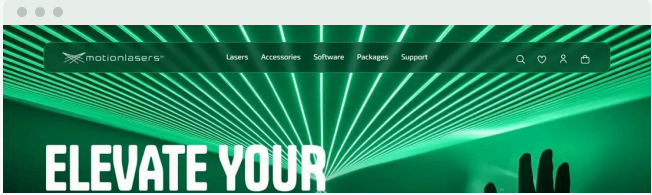

LGXNDS

Online store · Supplements · Shopify

Came to us for Shopify fixes, then kept us on for mobile, custom tools and the launch of its second brand.

Kept us on after launch (see Support).

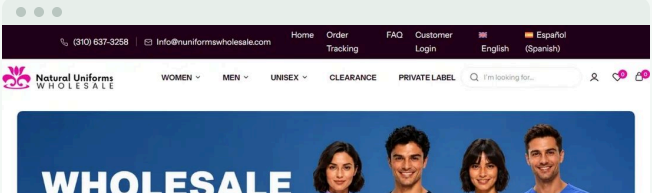

MotionLasers

Online store · Event equipment · US · Next.js, PHP

A storefront that had to perform on every device, rebuilt mobile-first.

Google PageSpeed on product pages from 30 to 90+, our measurement

Natural Uniforms

Retail and wholesale · Medical uniforms · US · WooCommerce

Retail and wholesale stores on WooCommerce that run on automation.

Orders, stock sync and tracking links need no staff to manage.

MORE WORK	WHAT WE BUILT	WHERE
Tanks & Vessels	A WooCommerce plugin that exports the full catalog to the Resale marketplace API	UK
Reztorer	Escrow payments for a marketplace connecting owners of furniture, watches and jewellery with restorers	UK
Karb Tech	An eCommerce front end for a supplier warehousing more than 20,000 types of MRO product	Hungary

How do we work together, and what will it cost?

Four ways to work with us. Every estimate is for your scope: the free estimate gives an approach, a rough timeline and a rough cost range in two working days.

A fixed-scope project

We scope it with you, then design, build, test and launch it, and support it after launch.

A dedicated team, or team extension

Engineers who join your sprints and rituals.

CTO as a Service

Technical strategy and architecture on demand.

Support and maintenance

After launch: support, maintenance and regular updates.

WHAT MOVES THE PRICE OF A STORE

Products and variants

More products, options and variants mean more data to set up and test.

Theme

A custom theme takes longer than adapting an existing one.

Apps and integrations

Each system you connect, such as an ERP, POS or warehouse, adds build and testing.

B2B pricing

Customer-specific prices and price tiers add rules to build and check.

Markets and payments

Each currency, Arabic and right-to-left layout, cash on delivery or subscription adds work.

Moving from your old store

Products, customers, orders and SEO all have to come across.

What do I do next?

Start with a free estimate, a conversation, or both.

Get your free estimate in two working days

Tell us how your store and orders run today, and within two working days you get an approach, a rough timeline and a rough number. You don't need a call for it; if you want to talk first, book 30 minutes with Vivek Sharma, CEO & Founder.
